A highly homologous gene (given in AAQ89338) was isolated that encoded a 91 kDa protein (AAR72080) (Stat1) that was responsive to interferogamma. Using a fragment of the mouse gene as probe, 2 additional members of the 113-91 family of receptor recognition factor proteins were isolated. The 2 genes (AAQ89339-40) were cloned in plasmids 13sf1 and 19sf6 and encoded proteins termed Stat4 (AAR72081) and Stat3 (AAR72082), respectively.

                                                                                                                                                                                                           Mouse cDNA clone 19sf6 (AAT31280) codes for mouse signal transducer and activator of transcription (STAT) protein STAT4 (AAW03180), a protein that serves a dual purpose, i.e. signal transduction from ligand-activated receptor kinase complexes followed by nuclear translocation and DNA binding to activate transcription. STAT4 includes a DNA-binding domain (see also AAW03167) useful for screening for antagonists that modulate STAT activity. The cDNA, which was obtd. from splenic/thymic cells, can be used for prodn. of STAT4 or mutant STAT4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1280

CC The present invention describes an antisense compound (1), 8 to 30 CC nucleobases in length, that is targeted to a nucleic acid molecule cell encoding STAT3 (Signal Transducer and Activator of Transcription) and CC which inhibits the expression of it. (1) has antiinflammatory, and inhibiting the expression of STAT3 in cells or tissues, treating CC an animal having a disease or condition characterised by a reduction in CC apoptosis, and inducing apoptosis in a cell. Diseases or conditions that are treated are rheumatoid arthritis, cancer of the breast, CC prostate, brain, head and/or neck, leukaemia, myeloma, melanoma or CC lymphoma. (1) can also be used for diagnostic methods in detecting and CC determining the role of STAT3 in various cell functions, physiological CC processes and conditions and for diagnostic methods in detecting and CC diagnostic heroid of STAT3. (1) can be used alone or with other drugs as CC an immunostimulator. (1) is used in sandwich and colourimetric assays, CC involving enzyme conjugation and radiolabeling and is used in CC diagnostic kits. AAC93150 encodes human STAT3 and AAC93231 encodes mouse CC STAT3 as given in the exemplification of the present invention. AAC93151 colour. Octobe which are used in example from the present invention. AAC93151 antisense oligonucleotides, and AAC93299 represents a mismatch control colour.

The cDNA is isolated by screening of liver cDNA library in phage lambda-gtll, using a polymerase reaction product (amplified using primers derived from an IL-6-treated mouse liver peptide isolated by binding to oligonucleotide AATO5620) as a DNA probe. APRF-inhibitors, antibodies, antisense oligonucleotides or ribozymes, may be treat diseases induced by IL-6, e.g. inflammatory disease, leukemia, cancer, osteoclasia, pulmonary hypertension, etc.

         transcription factor related to signal transmission of interleukin-6 (IL-6). Human placenta cDNA is isolated using an IL-6-treated mouse liver polymerase chain reaction product as a cDNA probe. APRF-inhibitors, e.g. antibodies, antisense oligonucleotides or ribozymes, may be used to treat diseases induced by IL-6, e.g. inflammatory disease, leukemia, cancer, osteoclasia, pulmonary hypertension, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2481

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2729
```

CC expression and or activity of target polypeptides associated with CC lung/respiratory disorders and malignancies, such as stimulating and CC activating peptide factors and transmitters, transcription factors. CC immunoglobulins and antibodies, antibody receptors, cytokines and CC chemokines, endogenously produced specific and non-specific enzymes. CC binding proteins, adhesion molecules and their receptors, cytokine and CC chemokine receptors, adenosine receptors, bradykinin receptors, central CC nervous system (CNS) and peripheral nervous and non-nervous system peptide cransmitters, defensins, growth factors, vasoactive peptides and CC receptors, binding proteins and malignancy associated proteins. The CC antisense oligonucleotides may be used in this way to treat disorders cincluding respiratory obstruction (especially pulmonary obstruction cand/or bronchoconstriction) and/or lung inflammation, allergy(les) and/or surfactant hypoproduction which are associated with a disease or CC and/or selected from pulmonary vasoconstriction, inflammation, cc allergies, asthma, impeded respiratory obstructive pulmonary distress syndrome (CC pulmonary transplantation rejection, pulmonary distress syndrome CC pulmonary transplantation rejection, pulmonary distress syndrome CC fragments and antisense oligonucleotides used in the exemplification of the present invention.

CC The present invention describes an antisense compound (I), 8 to 30 cc nucleobases in length, that is targeted to a nucleic acid molecule cc encoding STAT3 (Signal Transducer and Activator of Transcription) and cc which inhibits the expression of it. (I) has antiinflammatory, compound the expression of STAT3 in cells or tissues, treating cc antirheumatic, cytostatic and immunostimulatory activities. (I) is used cf or inhibiting the expression of STAT3 in cells or tissues, treating cc an animal having a disease or condition associated with STAT3 or a cc an animal having a disease or condition associated with STAT3 or a cc an animal having a disease or condition associated with STAT3 or a cc apoptosis, and inducing apoptosis in a cell. Diseases or conditions that are treated are rheumatoid arthritis, cancer of the breast, cc prostate, brain, head and/or neck, leukaemia, myeloma, melanoma or cl lymphoma. (I) can also be used for diagnostic methods in detecting and determining the role of STAT3 in various cell functions, physiological composition of STAT3. (I) can be used alone or with other drugs as cc an immunostimulator. (I) is used in sandwich and colourimetric assays, cc involving enzyme conjugation and radiolabeling and is used in diagnostic kits. AAC93130 encodes human STAT3 and AAC93231 encodes mouse coligonucleotides, and AAC93299 represent STAT3 phosphorothioate antisense oligonucleotides, and AAC93290 represents a mismatch control control article which are used in avance of the present invention.                                             transducer and activator of transcription 3 (STAT-3, see AAB19964).

The invention provides a crystal of a core portion of a STAT protein in dimer form with an 18-mer duplex DNA (see AAAB233) that contains a binding site for the STAT dimer. The core portion of a STAT contains a hinding site for the STAT dimer. The core portion of a state of the state of 
                                                                                                                                                                                                                                                                                                                                                                                                                        Novel crystal useful in drug screening assays, signal transducer, activator of transcription (

immunomodulatory; muscular active general; vulnerary; gastrointestinal general; nephrotropic; antiinfective; gynecological; or antibacterial activity. The invention also includes antibodies specific for the protein or polynucleotide sequences. The lung cancer associated polynucleotide sequences may be used for detection of lung cancer, chromosome identification, as chromosome markers, and for numerous oth diagnostic or research purposes. The proteins may be used to treat disorders such as neural, immune, muscular, reproductive,
                                                                         gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders. The proteins may also be used in the treatment of wounds and infectious diseases. Polynucleotide sequences ART18425 - ART18433 and peptide AAB58549 are used in the course of the invention for the identification and characterisation of the polynucleotide and protein
                                                       sequences
                                                                                                                                                                                                                                                                                     other

RESULT 10 AAA34938 ID AAA34938 standard; DNA; 2847 BP. XX

AAA34938

```
cc fibrosis, pulmonary hypertension, emphysema, chronic obstructive
cc pulmonary disease (COPD), and cancers such as leukaemias, lymphomas,
cc carcinomas, and cancers which may metastasise to the lungs, including
cc breast and prostate cancer. The reduction of the adenosine content of
ct the ONs reduces side effects. The A-containing ONs break down with the
cr release of deoxyadenosine which activates adenosine receptors causing
cc monchoconstriction and inflammation. AAA32312 to AAA35312 represent the
cc invention, which correspond to SEQ ID NO:1 to 2815, and then the last
cc invention, which correspond to SEQ ID NO:1 to 2815, and then the last
cc invention. N.B. Sequences given in the disclosure of the present
cc invention. N.B. Sequences given in the disclosure of the present
cc invention to AAA3392) are specifically claimed ONs from the present
cc invention to B. Sequences given in the disclosure of the present
cc invention do not match up with their corresponding SEQ ID NO: sequences
cc given in the sequence listing.

                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes a new composition comprising an antisense oligonucleotide (ON) with low adenosine (up to 15%), which targets nucleic acids involved in bronchoonstriction, allergies, and/or inflammation. The ON can have antiinflammatory, antiallergic, antiasthmatic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, impaired airways, including lung diseases and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosic conditions, respiratory distress syndrome, pain, cystic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 phosphorothioate; impaired respiration; inflammation; allergy; allergy disease; bronchoconstriction; inhibitor; antiinflammatory; antiallergic; antiasthmatic; cytostatic; analgesic; impaired airway; lung disease; ischaemic condition; pulmonary vasoconstriction; asthma; respiratory distress syndrome; pain; cystic fibrosis; emphysema; pulmonary hypertension; chronic obstructive pulmonary disease; COPD;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New antisense oligonucleotides useful for treating e.g. pulmonary vasoconstriction, inflammation, allergies, asthma, hypertension, bronchitis, emphysema, respiratory distress syndrome, ischemia or
                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Disclosure;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       В
The present sequence represents a cDNA encoding a predominant allelic variant of human Signal Transducer and Activator of Transcription 3 (STAT3) protein, an intracellular transcription factor which mediates IL-6 signals. This sequence differs from the original published human STAT3 gene sequence (Akira et al., 1994). Host cells comprising a recombinant STAT3 DNA molecule can be used for the recombinant express of the variant. STAT3 protein is useful as a medicament or pharmaceuti
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2401

                                                                                                                                                                                                                                                                                                                                                                                                                                                                   detect, treat or prevent pancreatic disorders, especially cancer. Agonists and antagonists to the antigens can be screened for. The pancreatic cancer antigen polynucleotides can be used to design nucleic acid hypridisation probes that can be used in chromosome mapping, linkage analysis, tissue identification and/or typing and a variety of forensic and diagnostic methods. The proteins can be used to generate antibodies which are used to purify, detect and target the polypeptides, including both in vivo and in vitro diagnostic and therapeutic methods. The proteins can be used to treat or prevent neural, immune system muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal or proliferative disorders. AAC99232 to AAC99240 and AAB54467 represent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   proteins, called pancreatic cancer antigens, given in AAB54008 AAB54466. The human pancreatic cancer antigens have cytostatic, neuroprotective, nootropic, immunomodulatory, relaxant, contrac gynaecological, cardiant and antiinflammatory activities, and c in gene therapy. The polynucleotide and proteins can be used fo preventing, treating, or ameliorating a medical condition or in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New nucleic acid that is a pancreatic cancer antigen for preventing, treating, or ameliorating a medical condition, particular pancreatic cancer, or for use in assays for diagnosing a nathological condition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        preventing treating, or ameliorating a medical condition or in assays for diagnosing a pathological condition or a susceptibility to one in subject Binding partners to the proteins and the activity of the proteins can be identified. The pancreatic cancer antigens can be used

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The sequences of cDNA encoding receptor regonition factors having mol.wt. of 113 kDa (Stat113), 91 kDa (Stat92) and 84 kDa (Stat84) are given in AAQB935-37 and the deduced amino acid sequences of to STAT proteins in AAR72077-99. These ISGF-3-derived proteins are activated by binding of interferon-alpha (all 3 Stat proteins) or interferon-gamma (Stat91) to cell receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Receptor recognition factor implicated in transcriptional stimulation of genes - useful in drug screening assays a for treating cellular debilitations, derangements and/or dysfunctions, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI; 1995-139598/18

Patent No. 5883228
GENERAL INFORMATION:
APPLICANT: James E. Darnell, Jr.
APPLICANT: Zibong Wen
APPLICANT: Curt M. Horvath
APPLICANT: Chong Zhong
TITLE OF INVENTION: FUNCTIONALLY ACTIVE REGIONS OF SIGNAL
TITLE OF INVENTION: TRANSDUCER AND ACTIVATOR OF TRANSCRIPTION (STAT)
NUMBER OF SEQUENCES: 39
CORRESPONDENCE ADDRESS:
ADDRESSEE: Klauber 6 Jackson
STREET: 411 Hackensack Avenue
CITY: Hackensack
                                                                                                                                                                     2821
                                                                                                                                                                                                                                                                                                                                                                                          2461
